CONTENTS

EXPLORATORY ANALYSIS OF RAINFALL DATA IN INDIA FOR AGRICULTURE

1. INTRODUCTION

1.1. Project Overview

India is an agricultural country and secondary agri-based market will be steady with a good monsoon. The economic growth of each year depends on the amount of duration of monsoon rain, bad monsoon can lead to destruction of some crops, which may result in scarcity of some agricultural products which in turn can cause food inflation, insecurity and public unrest. In our analysis we are trying to understand the behavior of rainfall in India over the years, by

months and different subdivisions.

Agriculture is the backbone of the Indian economy. For agriculture, the most important thing is water source, i.e., rainfall. The prediction of the amount of rainfall gives alertness to farmers by knowing early they can protect their crops from rain. So, it is important to predict the rainfall accurately as much as possible. Exploration and analysis of data on rainfall over various regions of India and especially the regions where agricultural works have been done persistently in a wide range. With the help of analysis and the resultant data, future rainfall prediction for those regions using various machine learning techniques such as Logistic Regression, Linear Regression, Cat boost Classifier etc.

1.2. Purpose

The main aim of objective is to find the

- Rainfall Prediction is the application of science and technology to predict the amount of rainfall over a region.
- It is important to exactly determine the rainfall for effective use of water resources, crop productivity and pre-planning of water structures.

2. LITERATURE SURVEY

2.1. Existing Problem

Climate is important aspect of human life. So, the Prediction should accurate as much as possible. In this paper we try to deal with the prediction of the rainfall which is also a major aspect of human life, and which provide the major resource of human life which is Fresh Water. Fresh water is always a crucial resource of human survival – not only for the drinking purposes but also for farming, washing and many other purposes. Making a good prediction of climate is always a major task because of the climate change. Now climate change is the biggest issue all over the world. Peoples are working on to detect the patterns in climate change as it affects the economy in production to infrastructure. So as in rainfall also making prediction of rainfall is a challenging task with a good accuracy rate. Making prediction on rainfall cannot be done by the traditional way, so scientist is using machine learning and deep learning to find out the pattern for rainfall prediction.

A bad rainfall prediction can affect the agriculture mostly framers as their whole crop is dependent on the rainfall and agriculture. It is always an important part of every economy. So, making an accurate prediction on the rainfall. There are number of techniques are used of machine learning, but accuracy is always a matter of concern in prediction made in rainfall.

There are number of causes made by rainfall affecting the world ex. Drought, Flood, and intense summer heat etc. And it will also affect water resources around the world.

PROJECT TITLE	AUTHOR	OBJECTIVE/OUTCOME
Spatial analysis of Indian Summer monsoon Rainfall (Mar 26,2014)	Markand Oza C.M.Kishtawal	Understanding the variability in rainfall, analysis of IndianSummer monsoon rainfall using Spatial resolution.
Climate impacts on Indian Agriculture. (16 June,2004)	K.Krishna Kumar K.Rupa Kumar R.G.Ashrit N.R.Deshpande J.W.Hansen	Presents about the analysis of Crop-climate relationships for India, using historical predictions.
Exploratory data Analysis of Indian Rainfall Data	Anusha Gajinkar	This Study shows that, India has two monsoon rainfall season one is northwest monsoon and second one is southeast monsoon.

2.3. Problem Statement Definition

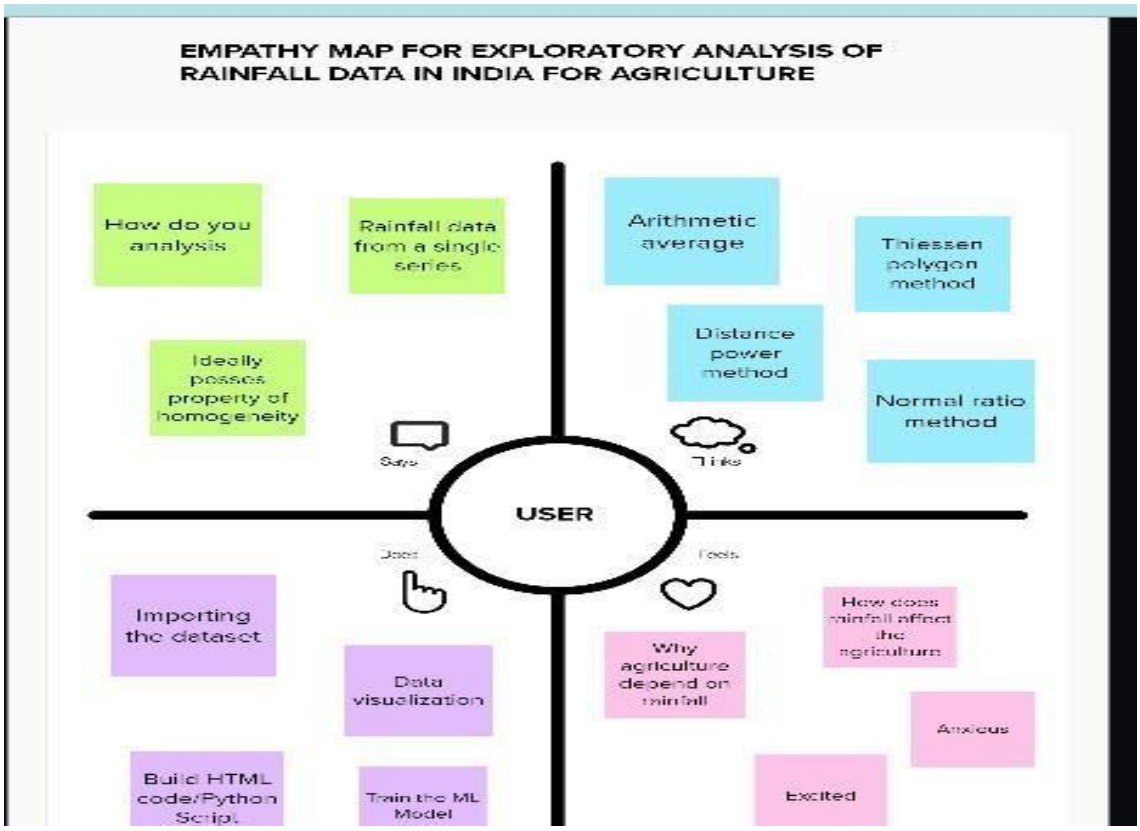
Rainfall has been a major concern these days. Weather conditions have been changing for time being. Rainfall forecasting is important otherwise, it may lead to many disasters. Irregular heavy rainfall may lead to the destruction of crops, heavy floods that can cause harm to human life. It is important to exactly determine the rainfall for effective use of water resources, crop productivity, and pre-planning of water structures.

This comparative study is conducted concentrating on the following aspects: modeling inputs, visualizing the data, modeling methods, and pre-processing techniques. The results provide a comparison of various evaluation metrics of these machine learning techniques and their reliability to predict rainfall by analyzing the weather data.

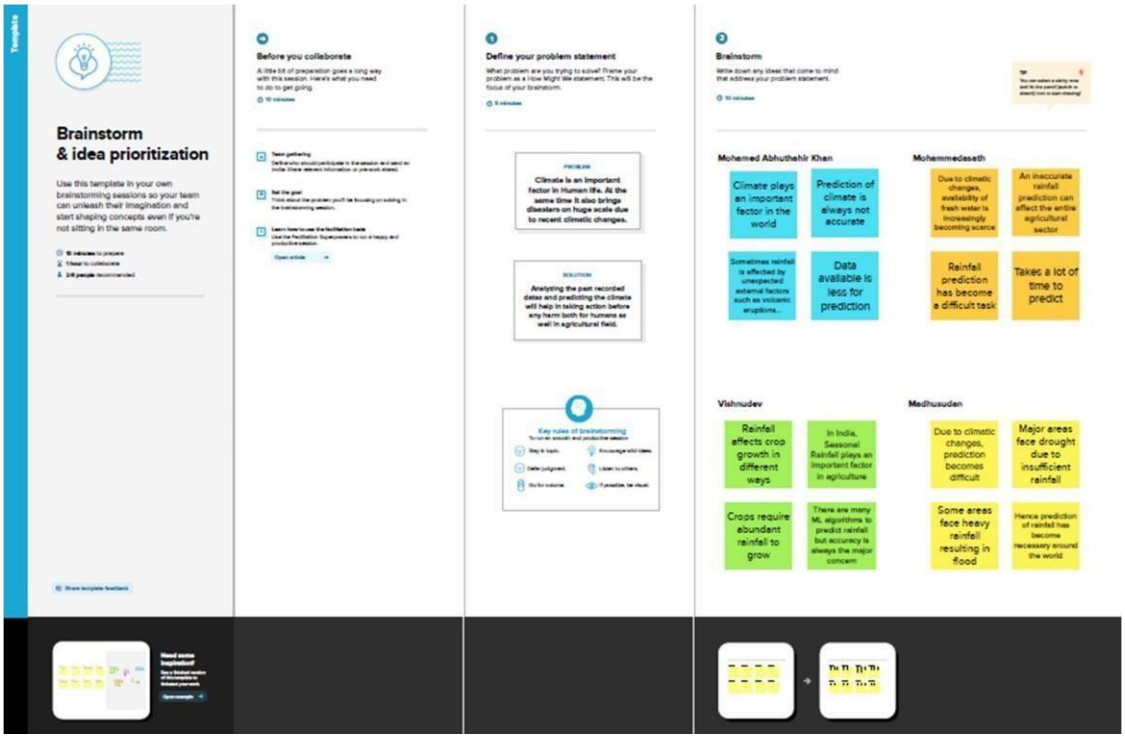
We will be using classification algorithms such as Decision tree, Random-Forest, KNN, and Xgboost. We will train and test the data with these algorithms. From this best model is selected and saved in pkl format. Once the model is saved, we integrate it with flask application and also deploy the model in IBM.

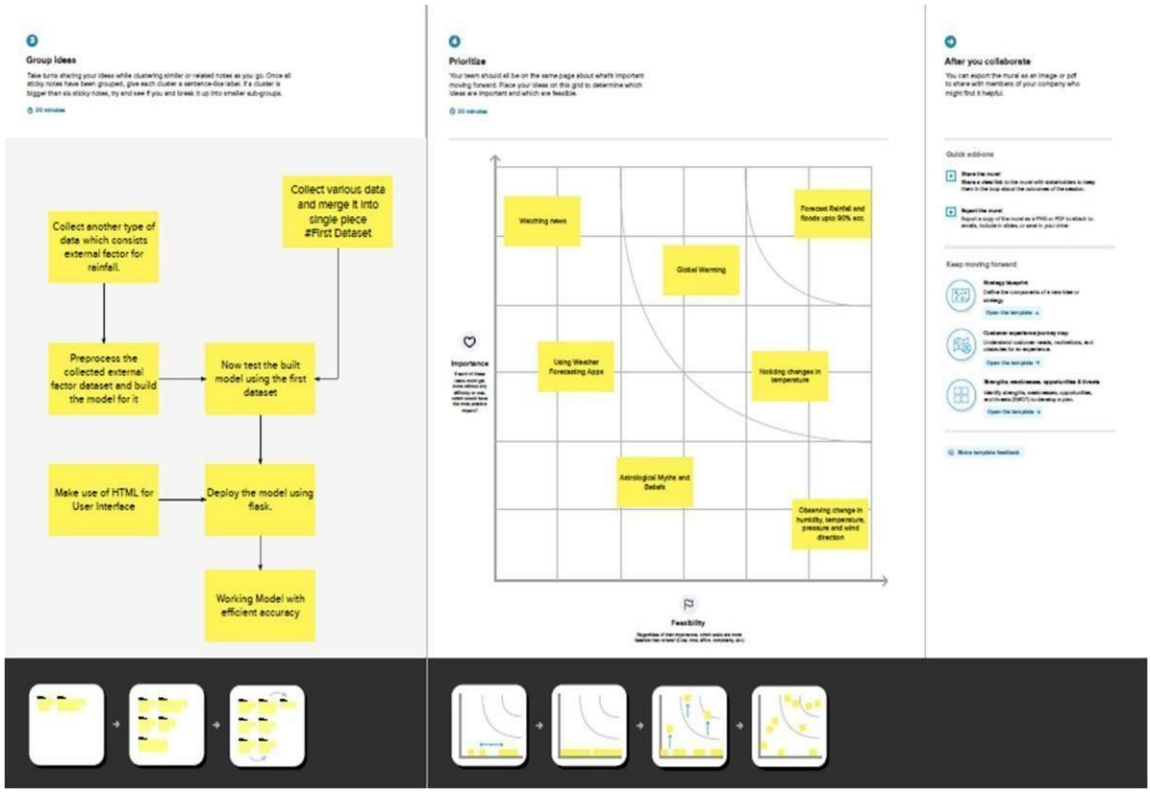
3. IDEATION AND PROPOSED SOLUTION

3.1. Empathy Map Canvas



3.2.Ideation and Brainstorming

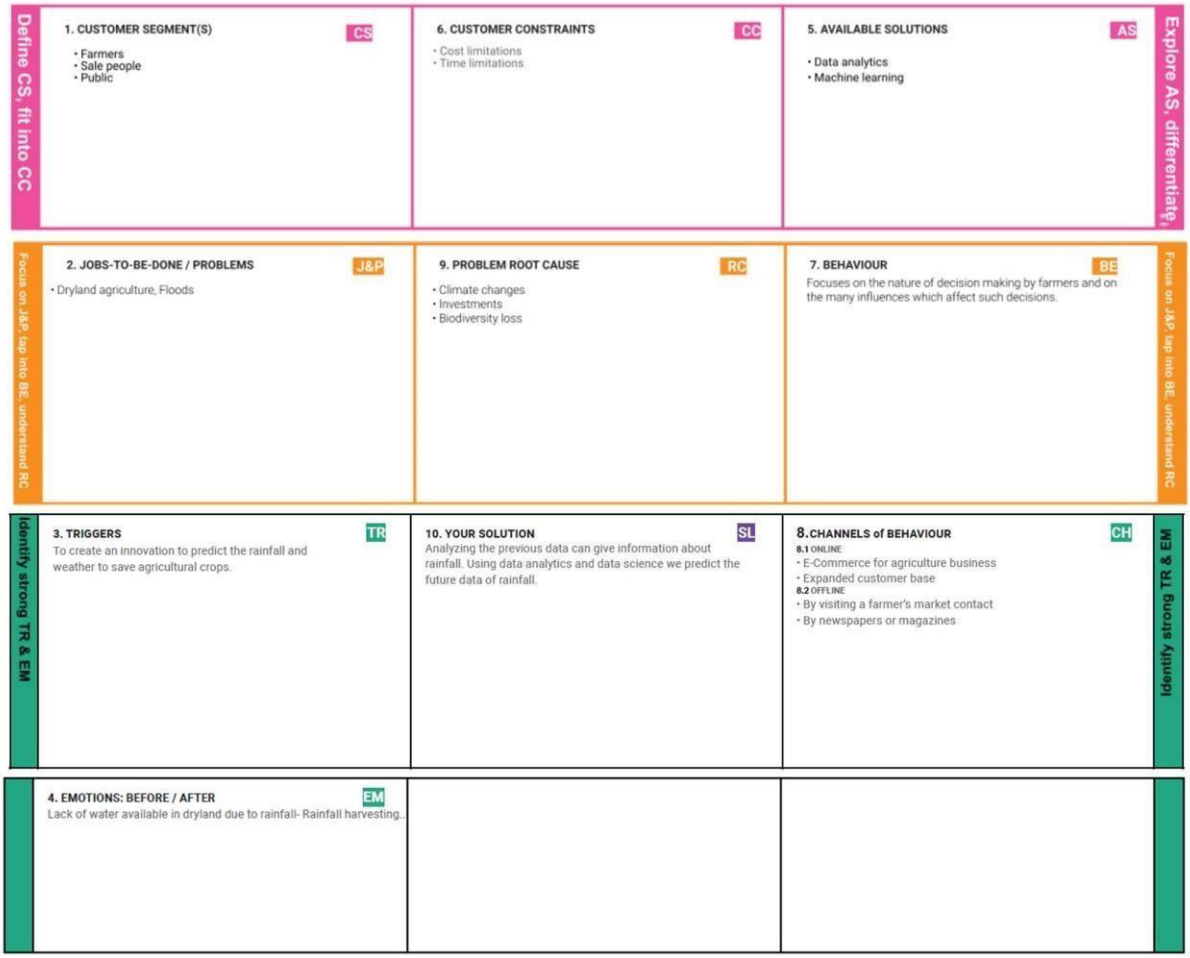




3.3. Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement	It is a known fact that uncertainty of rainfall in India leads to a lot of disaster every year like flood, drought, agriculture destination etc. Also, some of the parts of India have abundance of rainfall and some parts go completely dry. This type of differences in rainfall creates lot of problems in Indian economy. Predicting Rainfall is a major task in both summer and Rainy season.
2.	Proposed Solution	Analyzing the previous 10 years data can give us a rough idea about Rainfall pattern. Using Data Science, we can predict the Rainfall up to some good extent.
3.	Uniqueness	We won't be using AI, IoT or other fields and will only make use of ML concepts hence it is cost and time efficient.
4.	Social Impact	Farmers - Can save crops and plan which crops can be planted next. Citizens – Can save their life from natural disasters beforehand itself.
5.	Business Model	This could cost low as a person should develop knowledge in Data Science and probably a gadget to develop this. However, deploying as an App attached with other facilities might be expensive.
6.	Scalability	Farmers, Citizens

3.4.Proposed Solution Fit



4. REQUIREMENT ANALYSIS

4.1. Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Prediction details	User should enter the current location to get the predicted result.
FR-4	Forecasting Accuracy	Retrieve the forecasted weather conditions and measure the accuracy.
FR-5	Forecast	Forecasted flood probability from the rainfall amount is displayed on the webpage.
FR-6	Snapshots	The web page will display the condition as a report and pictures.

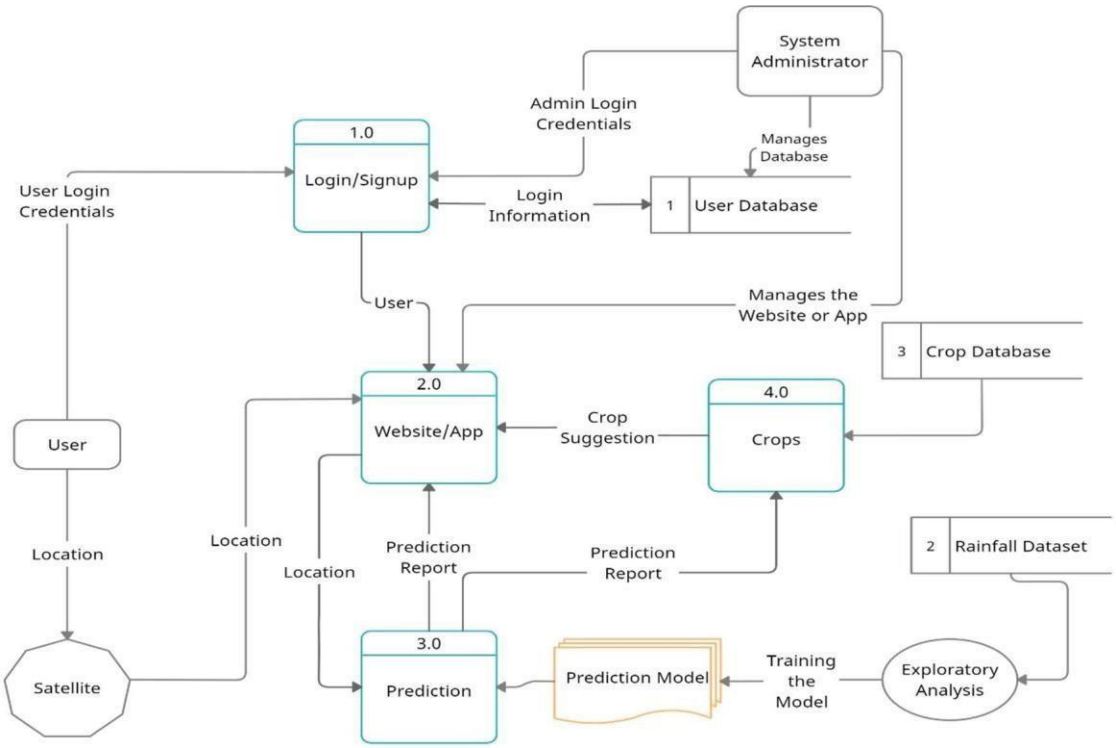
4.2. Non-Functional Requirements

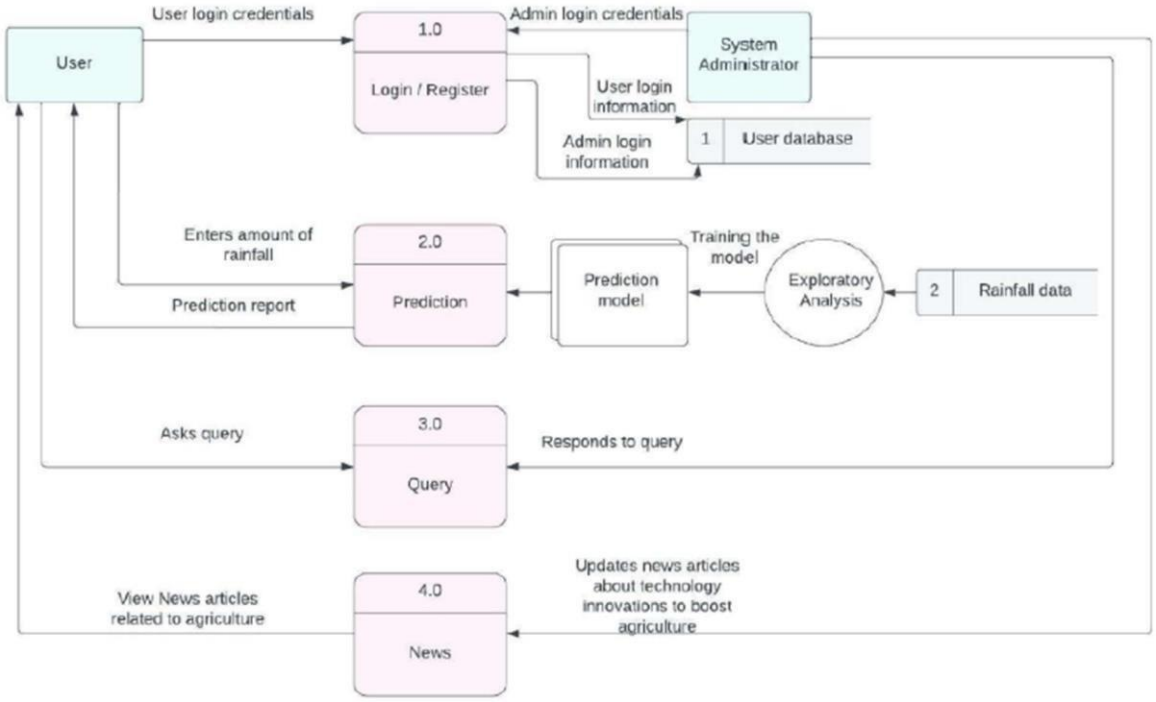
FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The usability of the website is to make all users will be satisfied with our requirements of the product. The user should reach the summarized text or result with one button press if possible
NFR-2	Security	The security of the project is to develop the website that prevents SQL injection attack, XSS attack and DOS attack
NFR-3	Reliability	The reliability of the system is to make sure the website does not go offline. The users can be reach and use program at any time, so maintenance should not be big issue.
NFR-4	Performance	The performance of the website isto provide data to all users without unnecessary delay and provide 24*7 availability.
NFR-5	Availability	The availability of the website is that the website will be active on The Internet and people will be able to browse to it.
NFR-6	Scalability	The scalability of the system is we have limited our project to Indian cities We have plans to scale it to continent's level in coming updates.

5.

PROJECT DESIGN

5.1. Data Flow Diagrams





5.2. Solution and Technical Architecture

S.No	Component	Description	Technology
1.	Website	User interacts with the prediction model through website to predict the rainfall Data	HTML, CSS, JavaScript
2.	Cloud Database	The model is provided with data from IBM cloud database	IBM Cloud DB, ibm_db(python package)
3.	API	Used to extend the service to other applications	Flask Application
4.	JWT & Sessions	It is used for Handling JSON web tokens (signing, verifying, decoding)	PyJWT, Flask-Sessions
5.	Machine Learning Model	This model is developed to predict the rainfall using ML algorithms.	Sklearn, Algorithms - DT & MLR
6.	Data processing	Data is pre-processed and then used for prediction.	Pandas, Numpy, Matplotlib

7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem

5.3. User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
	Registration	USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	Medium	Sprint-2
	Login	USN-3	As a user, I can log into the application by entering email & password	I can access the system	High	Sprint-1
	Dashboard	USN-4	As a user, I can view the details about the system and can navigate through the pages.	I can navigate through pages	High	Sprint-3
	Prediction	USN-5	As a user, I can enter the rainfall amount and get the prediction results	I can get the prediction result	High	Sprint-4
	News	USN-6	As a user, I can view latest news articles related to agriculture	I can view the articles	Medium	Sprint-3
Customer (Web user)	Contact	USN-7	As a user, I can ask queries regarding the system	I can clarify my doubts	High	Sprint-3
	Chat bot	USN-8	As a user, I can interact with chatbot to ask queries	I can get my queries clear instantly	Low	Sprint-4
Administrator	Login	USN-9	As a user, I can register for the application by entering my email, password, and confirming my password.	I can view and update the system	High	Sprint-1
	Prediction	USN-10	As a user, I can see the prediction result from the model trained by the system administrator	I can train the prediction model	High	Sprint-3

6. PROJECT PLANNING AND SCHEDULING

6.1. Sprint Planning and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	5	High	Sathyaprakash, Purusothamon, Silambarasan riyas
Sprint-1	Confirmation	USN-2	As a user, I will receive confirmation email once I have registered for the application	2	High	Sathyaprakash, Purusothamon, Silambarasan riyas.
Sprint-2	Registration	USN-3	As a user, I can register for the application through Facebook	3	Low	Sathyaprakash, Purusothamon, Silambarasan riyas.
Sprint-2	Registration	USN-4	As a user, I can register for the application through Gmail	4	Low	Sathyaprakash, Purusothamon, Silambarasan riyas
Sprint-1	Login	USN-5	As a user, I can log into the application by entering email & password	3	High	Sathyaprakash, Purusothamon, Silambarasan riyas
Sprint-3	Dashboard	USN-6	As a user, I can view the details about the system and can navigate through the pages	5	High	Sathyaprakash, Purusothamon, Silambarasan riyas.
Sprint-4	Prediction	USN-7	As a user, I can enter the location and get the prediction results for that particular location	5	High	Sathyaprakash, Purusothamon, Silambarasan riyas
Sprint-3	News	USN-8	As a user, I can view latest news articles related to agriculture	3	Medium	Sathyaprakash, Purusothamon, Silambarasan riyas

print-4	Chatbot	USN-9	As a user, I can interact with chatbot to ask queries	3	Low	Sathyaprakash, Purusothamon, Silambarasan riyas
Sprint	**Functional Requirement (Epic)**	**User Story Number**	**User Story / Task**	**Story Points**	**Priority**	**Team Members**
Sprint-4	Feedback	USN-10	As a user, I can give my feedbacks about the prediction rates, user interface and if any issue to be solved	5	High	Sathyaprakash, Purusothamon, Silambarasan riyas

6.2. Sprint Delivery Schedule

Sprint	**Total Story Points**	**Duration**	**Sprint Start Date**	**Sprint End Date (Planned)**	**Story Points Completed (as on Planned End Date)**	**Sprint Release Date (Actual)**
Sprint-1	10	6 Days	24 Oct 2022	29 Oct 2022	10	30 Oct 2022
Sprint-2	7	6 Days	31 Oct 2022	05 Nov 2022	7	8 Nov 2022
Sprint-3	8	6 Days	07 Nov 2022	12 Nov 2022	5	14 Nov 2022
Sprint-4	13	6 Days	14 Nov 2022	1 9 Nov 2022	10	18 Nov 2022

7.1. Feature-1: Model Building

For this feature we have made use of Jupyter notebook which uses Python programming language. To use Jupyter

Below images are source code for this feature:

Data Pre-Processing

1. Importing Neccessary Libraries

In [1]:
```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns

from sklearn import preprocessing
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import RobustScaler
import scipy.stats as stats
from collections import Counter
from imblearn.over_sampling import SMOTE

from sklearn import metrics
from sklearn.ensemble import RandomForestClassifier
from sklearn.svm import SVC
from sklearn.linear_model import LogisticRegression
from sklearn.naive_bayes import GaussianNB
from sklearn.neighbors import KNeighborsClassifier
from catboost import CatBoostClassifier
from xgboost import XGBClassifier

from sklearn.metrics import accuracy_score,confusion_matrix,classification_report

import warnings
warnings.filterwarnings("ignore", category=FutureWarning)
warnings.filterwarnings("ignore", category=UserWarning)

import joblib
```

Notebook install Anaconda, which is a desktop graphical user interface (GUI) included in Anaconda® Distribution that allows you to launch applications and manage conda packages, environments, and channels without using command line interface (CLI) commands. Navigator can search for packages on Anaconda.org or in a local Anaconda Repository. It is available for Windows, macOS, and Linux. It provides all basic necessary python libraries which are needed for Data Analysis and Visualizations.

In the above image, we import all necessary libraries needed for data exploration, preprocessing, model building and saving it. The below image specifies the values present in the dataset.

2. Exploratory Data Analysis

In [2]:
```
df = pd.read_csv("weatherAUS.csv")
pd.set_option("display.max_columns", None)
df
```

Out[2]:

	Date	Location	MinTemp	MaxTemp	Rainfall	Evaporation	Sunshine	WindGustDir	WindGustSpeed	WindDir9am	WindDir3pm	WindSpeed9am	WindSp

			`{'learning_rate': 0.1, 'max_depth': 8}`
			`0.8892227301457538`
			`Accuracy:83.11 %`
			`Standard Deviation:17.73 %`

8. RESULTS

9. ADVANTAGES AND DISADVANTAGES 9.1.

9.1 Advantages

- Farmers can know when to plant or harvest their crops
- People can choose where and when to take their holidays to take advantages of good weather
- Surfers known when large waves are expected
- Regions can be e vacuated if hurricanes or floods are expected
- Aircraft and shipping rely heavily on accurate weather forecasting

9.2. Disadvantages

- Weather is extremely difficult to forecast correctly
- It is expensive to monitor so many variables from so many sources
- The computers needed to perform the millions of calculations necessary are expensive
- The weather forecasters get blamed if the weather is different from the forecast

10. CONCLUSION

The weather prediction has become one of the most essential entities now a days. To improve the risk management systems and to know the weather in coming days in an automatic and in scientific way, many models have been emerging to assist in weather Prediction. In this paper, we have seen building a Weather Prediction Web Application from scratch by making use of 6 different ML algorithms namely CatBoost Classifier, Random Forset Classifier, Logistic Regression, GaussianNB, KNN and XGB Classifier. In the result section, the results from the all the six models and its results such as Accuracy, Error rate, mean absolute error, Root mean squared error, Relative squared error, Root relative squared error and time taken to build the model are tabulated. The results show that the CatBoost Classifier and XGB Classifier has output the results of high accuracy than all the other classifiers that were used. When coming to the time taken to build the model, The

11. FUTURE SCOPE

In upcoming future updates, the WEATHER FORECASTING application will have additional features such as:

- Live Location tracking
- News on Live Disasters
- Weather Forecast for next one week
- Will deploy as android app
- Help in predicting which crop will be best suited according to weather conditions
