

PROPOSED METHOD

We proposed to Detect the Indian monsoon and climate change with the help of satellite view of earth under surveillance of ISRO INSAT (Indian National satellite) it provides the result of detecting weather report of India and analyse by human powers.

- 1.By analysing weather report that shows highest and lowest rainfall in India.
- 2.To provide this data to all peoples of our country, we creating live weather report delivery apps.
3. We provide future data statistics for farmers to prevent their crops.

In order to achieve this needs we could increase the GDP of India
